

10 Reasons to Buy a Kala Laminator

1 Unique Patented Auto-Calibration

Constantly monitors and calibrates nip pressure and assures uniformity throughout full rolls (300'+"+) from start to finish. Eliminates waste, generates profit.

2 Electronic Nip Adjustment

Assures repeatable precise pressure without the use of a compressor and eliminates the need to feel the "sweet spot" as compared to using a manual adjustment hand crank.

3 No Tension Adjustments on Rewind / Take-up Shafts

Eliminates the need to constantly supervise and adjust the tensions to avoid the release paper from pulling the laminate away from the roller surface or from getting caught at the nip, in both cases, ruining the print.

4 Roll-to-Roll Capability

Comes standard with the laminator. Competition offers this at an extra cost.

5 Lower Front Rewind / Take-up Shaft

Facilitates double sided applications in a single pass, i.e. INSTASHIELD GLOSS top and WINDOWBOND bottom.

6 NEW Soft-Close Infeed Table

Unlike the competition's heavy and clunky infeed tables, our light-weight sturdy infeed table easily moves out of the way to gain full access to your work zone. The new table design is equipped with soft-close technology, assuring the table will not swing down and take an unnecessary beating.

7 LED Light Kit

Provides exceptional lighting at the roller and infeed area, regardless of available light conditions.

8 Built-in Storage Area

Stores up to 4 rolls of material for a quick and easy product switch.

9 One Piece Welded Steel Frame

Superior rigidity prevents frame from torquing and results in lighter tolerances and perfect tracking.

10 Five Self-Locking Roll Shafts

Comes standard with laminator. The only laminator in this price range with 5 shafts.

Laminator Models

Mistral

Top Heat Assist (86°F to 140°F)
Available in 65" and 83"

Arkane

Top Heat Assist (86°F to 284°F)
Available in 65"

Arkane D

Top and Bottom Heated
Rollers(86°F to 284°F)
No Pull Rollers
Available in 65"

Atlantic

Top and Bottom Heated Rollers
(up to 284°F)
Hot Laminator for Thermal
Encapsulation
Ideal for mounting onto
boards up to 2" thickness
Features a forced air cooling system
Available in 65"
