Durability

- Durability up to 4 years
- Shelf life 24 months (stored at a temperature of 20°C± 5°C and 50% ± 5% relative humidity)
- Do not expose to direct sunlight or heat sources
- The product must be stored vertically, so that its quality is not compromised

Printer Settings

Since the migration of the plasticizer affects the quality of the latex print, this guarantees it for 6 months. After that date, the material must be used in solvent, eco-solvent and UV printing. It must also be protected with the recommended lamination in order to provide the necessary strength. For the best possible print quality, please make sure you are using the correct print profiles.

Printing Platforms:

- Specially developed for solvent, eco-solvent, UV and UV gel on large format printing.

Non-vertical application results in a significant reduction in durability, as well as climate and angles of sun exposure. It is recommended that the vinyl remains at least 25 hours at the temperature of the workplace before it is used.
