

# EXPLANATION ACCESSORIES

**Berger Textiles** offers several useful accessories, mainly for finishing prints for display frame systems, banner and flags.

## Belts & Cords

All products are used for manufacturing edge reinforcements for banners, flags, beach flags and curtains. Also for better fixing of eyelets.

### Flag belt soft 4372 and Flag belt strong 4374

- Both made of Polyester, 4374 is stronger
- Have a folding seem in the middle
- Will be sewed around flag edges and could also be used for curtains etc.
- Stabilizes the textile before eyelet will be inserted > always keep in mind the diameter of the eyelet as the flag belt will be laid on both sides of the textile
- Help to keep the edges looking clean as wind, rain and sun influences them negatively

### Beach flag belt strong 5040

- Used for building the pocket (pole cover) of beach flags. Into this pocket the beach flag bar will be inserted
- Very elastic and therefore flexible to sew the curved pocket

## Hook & Loop

Varieties come in black and white as well as different widths from 25mm to 50mm.

### Hook and loop 3886

- To be sewed or as self-adhesive version
- For easily fixing textiles like curtains, printings etc
- Cheap version of hook and loop as used for signmaking > less opening and closing than e.g. for clothing in apparel
- Self-adhesive comes with hotmelt glue. Can also be used for outside applications, but only short term use!
- Sticks directly as needed for sign-making. Must not be activated.
- The self-adhesive one should not be stored longer than 6 months.
- Also suitable for PVC banner, composites and paper prints.

## Profiles

Flat profiles are sewn on all sides of a print for fixing it into a display frame system. For easy removal a max. 10 cm long profile removal strip should be attached as well. Berger Textiles offers three types of flat profiles in several widths. Their main difference is the raw material: PVC, silicone or TPE. Hardness is measured in shore. The lower the shore, the softer the flat profile.

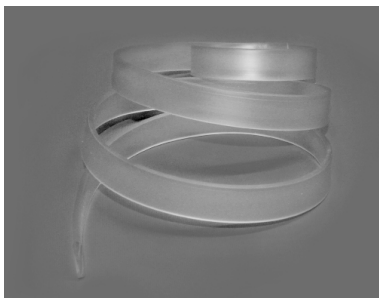

### Silicone flat profile 4477

- Shore A 60 +/-5
- transparent
- 100 linear meters on plastic spool
- 5,200 linear meters full pallet
- surrounded with talcum to prevent stickiness
- very flexible, if stretched it returns to its original form
- a massive Teflon® sewing footer is required for sewing
- environmentally neutral
- does not burn
- downcycling possible – shredded it could be used as filling material
- disposable with regular waste when thoroughly separated from textile

### TPE flat profile 4478

- Shore A 65 to 70
- transparent
- 100/200 linear meters on plastic spool
- 5,200 linear meters full pallet
- Less flexible than silicone. Once stretched, it does not return to its original form
- PVC free
- Made of SEBS (Styrene ethylene butadiene block copolymer), difficult to recycle as the components must be splitted into their original parts using a complex procedure

### PVC flat profile 4545

- Shore A 73 +/-4
- transparent
- 200 linear meters on paper spool with plastic core
- 10,000 linear meters full pallet
- strong profile
- can be recycled max. twice, after that it gets spongy

Explanation Accessories // Carabiner & snapper, Cleanfix and Tapes

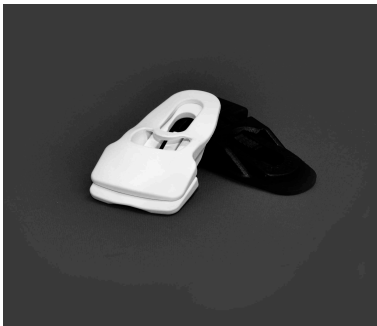

## Carabiner & snapper

Smart accessories used for fixing flags, banners etc.

### Flag carabiner 4515 (4525 with belt)

- Used to fix flags on flag rope
- Available in black and white
- Also available with belt (4525)

### Snapper 4535

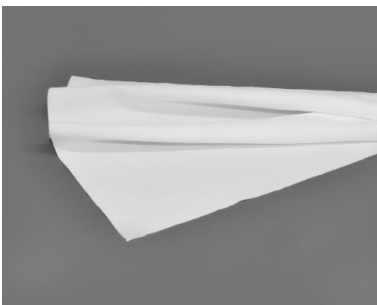

- For fastening flag and banner.
- Real alternative for eyelets as they are reusable
- Available in black and white

### D-Ring 4615

- For fastening flag and banner.
- Available in white

## Cleaning towel for printhead

### Cleanfix 4408

- Used for easily cleaning print heads
- Pilling free textile
- Not absorbing
